📍 Duri Kosambi, Cengkareng, West Jakarta, DKI Jakarta, Indonesia

SUMMARY

Experienced mobile developer with a proven track record of designing and building 5+ Android and multiplatform applications using Kotlin and Compose Multiplatform. Accustomed to serving as sole *Tech Lead* from system architecture through deployment, independently handling both multiplatform frontend and multi-language backend microservices. BNSP-certified Junior Mobile Programmer with 1 year of hands-on Quality Assurance internship experience in the govtech industry.

EDUCATION

Universitas Terbuka (Open University) <i>Bachelor of Information Systems</i>	Jakarta, Indonesia 2025 – Present
SMK Negeri 21 Jakarta <i>Vocational High School — Software Engineering</i>	Jakarta, Indonesia July 2022 – June 2025
- Represented school at LKS IT Software Solution for Business competition, Jakarta Pusat City Level — Grade XI, 2024. - Represented school at LKS 3D Game Art competition, Jakarta Pusat City Level — Grade XII, 2025.	
SMP Negeri 264 Jakarta <i>Junior High School</i>	Jakarta, Indonesia July 2019 – June 2022
SD Negeri Duri Kosambi 11 Petang <i>Elementary School</i>	Jakarta, Indonesia July 2013 – June 2019

EXPERIENCE

PT Cartenz Technology <i>Quality Assurance Intern</i>	Jakarta, Indonesia July 2024 – July 2025
SmartGov Revenue (Web Application): Designed and executed comprehensive test scenarios for the BPHTB module, covering taxpayer registration flows, identity verification, property data entry, payment processing : full, installment, and arrears, automated NJOP tax calculation, SSPD document output validation, and physical document printing accuracy. SmartGov Revenue (Mobile Application): Validated GPS location acquisition accuracy under varying network conditions, tested spatial map distribution features for tax area visualization on Android, and verified real-time data synchronization consistency between the mobile client and backend APIs. SmartGov Retribusi: Conducted full feature coverage testing from scratch on the newly developed retribution module, including GIS-based interactive spatial map functionality, multi-role account data flow validation : admin, field officer, and taxpayer, and GPS coordinate accuracy verification against the backend integration and mobile layer. Citigov: Executed end-to-end business logic testing for the BPHTB workflow, including user onboarding, self-registration as a taxpayer, and navigation across all digital form stages. - Authored structured test case documentation containing test scenarios, reproduction steps, test data, expected results, and actual results; reported defects with comprehensive bug reports including screenshots and reproduction evidence. - Performed regression testing cycles after each sprint deployment in both <i>test environments</i> and <i>regional production environments</i> actively used by local government offices. - Actively collaborated with development teams in bug triage sessions, conducted re-testing of fixes, and confirmed defect closure prior to production release. - Implemented automation testing using Playwright for web end-to-end scenarios and Appium on top of Selenium for Android mobile automation. - Simultaneously managed testing across two environment types: staging environments for new feature validation and live regional production environments for release validation. - Leveraged Azure DevOps for test backlog monitoring and task management while orchestrating Git-based version control workflows for automated test suites.	

- PresensiQ** | *Kotlin, Compose Multiplatform, Go, Rust, Elixir, PostgreSQL, WebSocket* 2025 – Present
- Architected and fully developed a **Smart & Professional Attendance System** as *Tech Lead* and sole developer, spanning multiplatform frontend and multi-language backend microservices.
 - Frontend built with **Compose Multiplatform**, delivering a single codebase across **Android, Desktop JVM, iOS, and WebAssembly browser**. Navigation via Decompose; HTTP via Ktor.
 - **API Gateway (Go)**: Centralized router, reverse proxy, and PASETO token claims verification before forwarding to downstream services.
 - **Identity Service (Rust)**: User authentication, credential management, and secure **PASETO v4 token** issuance; client-side background daemon for automated token lifecycle monitoring.
 - **Policy Service (Rust)**: Casbin-based Role-Based Access Control for granular per-tenant permission management.
 - **Form Service (Go)**: Dynamic attendance form templates with configurable open/close windows, late-threshold grace periods, and user group targeting.
 - **Submission Service (Go)**: Processes attendance check-ins with **GPS geolocation verification** against a configurable radius boundary; enforces time-window constraints; stamps on-time, late, or absent status.
 - **Report Service (Go)**: Generates attendance reports as CSV exports and supports bulk historical data import.
 - **Realtime Service (Elixir)**: **Phoenix WebSocket Channels** for live, push-based attendance dashboard updates without page refresh.
 - **Audit & Media Service (Go)**: Immutable system audit trail logging and profile/media file upload management.
 - Implemented database-level **multi-tenancy** using PostgreSQL **Row-Level Security**, ensuring complete data isolation between organizations.
- TemuBelajar** | *Kotlin Multiplatform, Elixir, WebRTC, WebSocket, PostgreSQL* 2024 – 2025
- Designed and built an **inter-university student video chat matching platform** as *Tech Lead* and sole developer in an academic context.
 - Frontend: **Kotlin Multiplatform** targeting Android, iOS, Desktop, and Web WASM from a single codebase.
 - **Signaling Service (Elixir/WebSocket)**: WebRTC peer negotiation for direct video/audio chat between matched students.
 - **Matchmaking Service (Elixir)**: Real-time random pairing algorithm for students across different universities.
 - **Auth & User Service**: Account management with university identity verification; **Social Service** for student connections; **Email Service** for account verification and notifications.
- Blaster Browser** | *Kotlin, Jetpack Compose, Decompose, ObjectBox, Tor Network* 2026
- Developed an Android browser with automated **content filtering** to block gambling, pornography, and other harmful websites as sole developer.
 - Integrated **Tor Network** for network anonymization and user privacy protection against ISP and third-party tracking.
 - Used **ObjectBox** as a high-speed local database for browsing history, bookmarks, and custom block-lists; Koin DI and DataStore for user settings persistence.
- Qalbun** | *Kotlin, Jetpack Compose, Decompose, Ktor, Koin, ObjectBox, AI* 2025
- Developed the Android mobile frontend for an **Islamic companion application** using Clean Architecture; responsible for all UI layers, navigation, and API integration.
 - Features: **Al-Quran** — Arabic text, translation, and audio, **Hadith** multi-narrator collection, **Dzikr** daily counter, **Asmaul Husna**, **Daily Prayers**, **Prophet Stories**, prayer time guide and reminders, and **QalbunAI** Islamic AI assistant.
 - Architecture: Clean Architecture with Decompose for navigation, Ktor for HTTP, Koin for DI, ObjectBox for offline storage.
- Mirikanime** | *Kotlin, Jetpack Compose, Ktor, KSP, Kotlin Serialization* 2025
- Developed the Android mobile frontend for an **anime streaming application**; responsible for all UI, navigation, and REST API consumption.
 - Features: anime catalog with search and genre filtering, anime detail pages with episode listings, and in-app video streaming player.

TECHNICAL SKILLS

Mobile Development: Kotlin, Jetpack Compose, Compose Multiplatform, Kotlin Multiplatform, Android SDK, Decompose, Ktor, Koin, ObjectBox, Coroutines, Flow, DataStore
Backend & Database: Go, Rust, Elixir, PostgreSQL, REST API, WebSocket, WebRTC, PASETO v4, Casbin RBAC, Row-Level Security
DevOps & Tools: Git, Android Studio, IntelliJ IDEA, Docker, Postman, Makefile
Quality Assurance: Manual Testing, Automation Testing, Playwright, Appium, Selenium WebDriver, Regression Testing, UAT, GPS/Spatial Map Testing

CERTIFICATIONS

Professional Competency Certificate — Junior Mobile Programmer Indonesia
National Professional Certification Agency (BNSP) May 2025

- Nationally recognized professional competency certification issued by the Indonesian Government’s BNSP, obtained through a structured competency assessment conducted by certified assessors.
- Covers mobile application architecture design, Android UI/UX implementation, REST API integration, state management, and professional mobile development best practices using Kotlin.

Quality Assurance Internship Certificate Jakarta, Indonesia
PT Cartenz Technology July 2025

- Issued upon successful completion of a 1-year Quality Assurance internship program, validating proficiency in functional, regression, and automation testing for enterprise-scale government application platforms.
- Covers direct experience testing in regional production environments across SmartGov Revenue, SmartGov Retribusi, Mobile App SmartGov Revenue, and Citigov applications.
